PROJECTS

- MERN Stack E-commerce Project | 2024 Technologies: React, Node.js, Express, MongoDB, Stripe Developed a dynamic e-commerce platform using React for an engaging user interface and React Router for seamless navigation. Implemented secure user authentication with login and signup functionality. Designed and built product listing and detail pages, enhancing the shopping experience. Created robust backend APIs using Node.js and Express for efficient product management and secure authentication. Utilized MongoDB to manage product and user data, ensuring data integrity and scalability.
- Android E-commerce Application | 2024 Technologies: Java, Android Studio, Firebase, Glide Developed a mobile e-commerce application featuring product listings, cart functionality, and a streamlined checkout process. Integrated Firebase Storage for efficient product image storage and retrieval, optimizing app performance. Employed Glide library for fast and efficient image loading, enhancing the user experience. Implemented robust checkout form validation to ensure data accuracy and improve the overall user experience.
- Doctor's Office Management Web Application | 2024 Technologies: PHP, SQL, HTML, CSS Developed a comprehensive web application to streamline doctor's office operations, improving efficiency and patient management. Built frontend and backend components using PHP and SQL, ensuring a robust and scalable system. Implemented reporting features and business calculations to provide valuable insights into office performance. Generated automated PDF reports using the FPDF library, improving data accessibility and reporting capabilities.
